

THEVINDU DILMITH WICKRAMRATHNE

BSC(HONS) CYBER SECURITY UNDERGRADUATE | ASPIRING SECURITY PROFESSIONAL
92/5A, Wasana Mawatha, Watthegedera, Maharagama | thevi6381@gmail.com | 0707839423

SUMMARY

High-performing Cyber Security undergraduate with a proven track record of rapid technical mastery and high-level logical problem-solving. A "T-shaped" professional with deep technical skills in offensive security and a broad understanding of full-stack development (Flutter/React Native). Expert in leveraging AI to accelerate research, development, and troubleshooting. Known for delivering professional, "A to Z" projects—from architecting custom CTF environments to implementing MFA security protocols.

TECHNICAL SKILLS

- Offensive Security: Pentesting (Metasploit, Nmap, SQLmap, Hydra), Wireless Cracking (Aircrack-ng), MITM Attacks (Bettercap), Social Engineering (BeEF, Zphisher).
- Defensive & Infrastructure: MFA Implementation (Ubuntu), Vulnerability Management (Nessus), SIEM (Splunk BOTS v3), Memory Forensics (Volatility).
- Security Development: Python (Cryptographic/Automation scripts), Secure Full-Stack Dev (React, Flutter, Firebase RBAC), and C#.
- Research & AI: AI-assisted development, advanced technical research, and documentation.

EDUCATION

BSc (Hons) in Cyber Security APIIT - Sri Lanka (University of Staffordshire)	July 2024 - Present
Foundation Certificate in Information Technology Curtin University	June 2022 - June 2023
Certificate in Cyber Security & Ethical Hacking (C CSEH) CICRA Campus	October 2023
UOM Trainee - Python Programmer University of Moratuwa	May 2023

PROJECTS

Project Neon Silence | Lead Security Architect

- Architected a narrative-driven "Cyber Kill Chain" CTF environment on Ubuntu Server with a 4-tier progression system.
- Engineered diverse challenges involving CWE-134 vulnerabilities, RSA exploitation, and Linux privilege escalation (SUID/Tar Wildcard Injection).
- Automated lab deployment using Vagrant and Bash, ensuring a repeatable environment for offensive security training.
- Authored comprehensive exploit path analyses and industry-standard remediation strategies.

Enterprise Security Lab | Windows & Linux Hardening

- Simulated real-world attack vectors using MS17-010 (EternalBlue) to establish and verify backdoor persistence.
- Hardened Ubuntu systems by implementing MFA via PAM (Pluggable Authentication Modules) to secure authentication.
- Conducted efficacy audits using Hydra to ensure secondary challenges were strictly enforced and to eliminate "fail-open" vulnerabilities.

Project: "Fixit Lanka" Service Management Ecosystem | Full-Stack Mobile Developer | Flutter, Firebase, Dart

- Architected a Tri-App Ecosystem (User, Supervisor, Worker) using Flutter and Firebase to digitize end-to-end service lifecycles.
 - Engineered a real-time, serverless backend with Firestore, implementing bi-directional synchronization and a custom push notification engine.
 - Developed role-specific interfaces featuring RBAC (Role-Based Access Control) to manage job dispatching, task tracking, and field operations.
 - Optimized app performance with Provider state management and secured data integrity via granular Firestore Security Rules.
-
